

**Power Supply-** 9V negative tip power supply

**Controls-** Drive (Kill), Speed (Eat), Depth (Dig) controls, and an internal master volume control

**Switches-** 1 3PDT On/Off switch- 2 toggle switches 1 to control Tremolo (Chop Chop) and 1 for the bass response (Kaw)

**Jacks-** Output, 9V DC, Input

**Indicators-** LED 3mm blue

**Description-** The Raven pedal is in a class of its own- at the initial onset, the Raven is a lush chorus designed to reproduce some of the classic sounds bassist / producer Paul Raven unleashed during his 30+ years in the recording industry.

Lurking under the layer of chorus resides a layer of thick, full bodied fuzz. This concept is an industry 1st and was designed to meet the rigorous tone shaping requirements that a Journeyman of Raven's standards would demand.

- 9V DC jack. The Raven must be powered by an industry standard 9volt negative tip power supply.
- "Dig" determines the depth of the chorus effect.
- "Speed" determines rate of the chorus effect.
- "Kill" determines the level of distortion.
- "Chop Chop" toggles between chorus and vibrato
- "Kaw" toggles the bass response

**Subject to change without notice**
